

## **Meter Display Registers Used in Renewable Energy Installations**

The following sequence of registers is displayed on meters programmed for use at premises having an interconnected renewable energy generator:

- **888** - Segment Check Display: All possible liquid crystal display (LCD) segments of the display are visible.
- **000** - Recorder ID Number: A unique five digit number to identify the meter to data collection systems. This number is 7XXXX for renewable energy installations.
- **000** - Meter Number: A unique six digit number of the meter.
- **14** - Date MMDDYY: Displays the current date.
- **15** - Time HHMMSS: Displays the current time (24 hour format).
- **04** - Delivered kWh: Cumulative amount of energy Tampa Electric has delivered to the customer (kilowatt-hour).
- **06\*\*** - Demand kW: Peak energy (kilowatt)
- **07** - Received kWh: Cumulative amount of energy Tampa Electric has received from the customer's renewable energy generator.
- **16\*** - NET kWh: Cumulative amount of delivered energy minus the cumulative amount of received energy.

\* Display 16 – NET kWh is not available for Kbase meters. Kbase meters will have all the displays except 16.

\*\* Display 06 – Demand kW is not available on all meters. Account must be set up as a Demand Rate Account.
